

C Language

C language is a high level language.

C language is a mother level language.

C language is a structure programming language.

C is a system programming language.

C language is developed by Dennis Ritchie in year 1972 in USA in Lab AT & T-bell lab.(American Telephoning & telegraph).

Features of C Language -

There are some features -

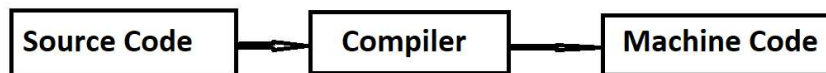

1. Simple
2. Speed
3. Portable
4. Libraries
5. Structured
6. Statements

Note:- If we learn C language then some Software Requirement.

1. Turbo C++
2. Dev C
3. Vs Code
4. Netbeans
5. Codeblock
6. Notepad++

Compiler:-

Compiler is an application that is convert source code into machine code .

Keyword:-

Keyword is reserve word it is predefine into compiler.

Example:- if ,for ,while ,break,continue,else-if,do-while etc.

Header File:-

Header file is also known as library file.

All Header file save in include folder.

Example:- stdio.h , conio.h , math.h , dos.h , stdlib.h , string.h, graphics.h etc.

Notes:- If we learn C Language then some symbol knowledge are required:-

#:- Preprocessor Directive

file save in include folder.

stdio.h:-standerd input /output

conio.h:-console/input /output

void main():- It is show starting point of program.

clrscr:- It is used to clear the screen .
